GLADIOLUS

Easiest Cut Flower to Grow

No flower gives as much satisfaction to the gardener as the Gladiolus, either for a cut flower or show in the garden. Our stock is selected for variety of color and grown in a thrip-free section.

For Control of Thrip. All Gladiolus bulbs should be soaked for 7 hrs. before planting, in a solution of 4 level teaspoonfuls of Semesan to 1 $\frac{1}{3}$ qts. of water or 4 ozs. to 3 gals. of water. 3 gals. will treat about 500 bulbs.

If the bulbs cannot be planted immediately after treating they should be spread out to dry.

The following list includes the ever-popular varieties. We list them according to shades to assist in ordering.

Everblooming HYBRID TEA ROSES

**STRONG, 2-YEAR, FIELD-GROWN PLANTS,
GROWING IN SPECIALLY PREPARED POTS**

Due to the splendid success of our customers last year, we have decided to feature Roses in pots, in preference to the dormant Roses. By this method the purchaser is assured of a living Rose when planting. These Roses are all extra-strong, 2-year, northern Michigan field-grown bushes that have been planted in specially prepared pots in February and placed in frames where only sufficient heat is used to exclude frost. Early in Spring the sash or covering is removed and the plants allowed to assume natural growth. Delivery May 1st.

In compiling this list of Roses, we have selected those varieties that have given the best satisfaction in the Middle West territory, both from a standpoint of hardiness and blooming qualities.
